EVALUATION OF CONTEST

~~CLASS~~ CHANGED TO: TS S (C)

~~DDA Memo, 4 Apr 77~~

Auth: DDA REG. 77/1763

Date: 13 Apr. 78 By: 002

1. The Krupp-Gruson-Werke in Magdeburg is manufacturing cement machinery.
2. The Krauthelm Steel Foundry in Chemnitz (K68) has started the first Siemens furnace. Since there is a shortage of pig iron, scrap is used, of which there is an ample supply.
3. The Maximilianhütte at Untertwickenborn (J63) in Thuringia has three blast furnaces, as well as the rolling-mill and press-shops. Since raw materials are plentiful, increased production of machines and iron construction can be expected. At the beginning of November 1946, 3,000 men were employed.
4. The Rudolf Sack firm in Leipzig produces agricultural machinery, ploughs, and ploughshares, using old armaments as raw material.
5. The new firm Flomag in Plauen (K12) has been formed from the Vomag concern. Its production program comprises the production of printing machinery, automobile spare parts, and machine tools. Raw materials are available.
6. Otag Schreibfedernfabrik Heintze in Oranienburg (Z67) has developed a new manufacturing process which economizes from 30% to 60% on raw materials, in comparison with other writing pen manufactures. The firm covers all requirements in the Russian Zone.
